DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1,7-10,29 and 30 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Mizumura (U.S. Patent No. 6,526,232).

Mizumura shows an optical device in Fig. 2 as the lens barrel 30 and the case 40 attached to it, and an information write device as the personal computer shown by reference numeral 20 in Fig. 1. The optical device of Fig. 2 includes an optical member shown as lenses 98 and 112 in Fig. 4, drive means as motors 90 and 104 in Fig. 4 along with the means transmitting motion from the motors to the lenses, storage means as the memory in CPU 80 in the case 40 as shown in Fig. 4 that stores the data transmitted from the personal computer 20 to the CPU 80; and control means as the main control program within the CPU 80. In Figs. 6, a shot mode of operation from the monitor display of the personal computer is shown on the right hand side of the monitor. In the shot mode, information such as lens position and speed are stored in preset memories. The stored preset positions and speed are transmitted to the CPU 80 of the optical device shown in Fig. 2 and stored in registers or memories within the CPU.

Applicant cannot rely upon the foreign priority papers to overcome this rejection because a translation of said papers has not been made of record in accordance with 37 CFR 1.55. See MPEP § 201.15.

Allowable Subject Matter

Claims 2-6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The primary reason for allowance of these claims is the claim limitation that the write device generates information of an arbitrary form and the optical device includes means for converting the arbitrary information into a form processible by the control means, in combination with all the other claimed limitations.
